

Chelmsford College Group Graduate Training Scheme

Systems Development

The Systems Development Team at Chelmsford College designs and builds a diverse range of bespoke web-based systems that are used throughout the College in its various activities.

As a member of the Systems Development Team you will have technical design and software development involvement as a developer. Your work will be on a variety of web-based applications, including the new Student Intranet - a solution being re-developed for students to improve the information available and make accessible information that will aid their academic & personal progress. In addition you will be expected to contribute, where appropriate, to the design and development of systems and processes relating to wider range of internal and external systems.

You will work on projects, either alone or teaming up with staff in the Development team or wider College group. You'll work closely with the various stakeholders, the Head of Information Systems & Development and development team to design and implement web-based solutions using, Classic ASP, ASP.NET, JavaScript, CSS, HTML, XHTML, DHTML, XML, SQL, PL/SQL and related technologies.
